

SYSTEM AND METHOD FOR CONFIGURING GRAPHICS  
PIPELINES IN A COMPUTER GRAPHICAL DISPLAY SYSTEM

ABSTRACT OF THE DISCLOSURE

A system and method for configuring a plurality of graphics pipelines in a computer graphical display system is disclosed. The method comprises displaying a graphical user interface to enable a user to graphically specify at least one parameter for a plurality of pipe rectangles of the computer graphical display system, each of the plurality of pipe rectangles being associated with at least one of the plurality of graphics pipelines, receiving the at least one parameter, and updating a compositor of the computer graphical display system in real-time based at least in part on the at least one parameter.
